

Bilstein Group – Specialist Parts Supplier

German based Febi Bilstein has grown from humble beginnings in 1844 to a dynamic modern company. Today Febi produces and distributes technical spare parts for the industrial engineering and automotive sectors, and is one of Germany's largest companies within this sector.

Based near Dusseldorf, Febi has invested in its head office in Ennepetal and opened a new logistics centre in Wuppertal in 2002.

Combined this brings its production and storage capacity to over 51,000m². The company employs over 800 people worldwide, including a UK subsidiary and boasts a range of over 22,000 products, to which around 2,000 new items are added every year.

What can Febi offer?

The Febi range is vast, and covers nearly all major parts for most vehicle types. Febi can supply a brake disc for a Vauxhall, a control arm for a Ford or a water pump for a Peugeot. However, Febi is rapidly becoming *the* name for 'specialist' parts – perhaps items you may feel are not readily available in the aftermarket.

Did you know the oil dip stick guide funnel for all Volkswagen Tdi engines was available?

Or a control arm for the new Passat and A4?

Febi prides itself on being able to offer these unusual 'B & C movers'. Its success is strongly rooted in its ability to not only produce and source these parts, but also ensure lead times are the shortest possible.

A strong product department and high levels of technical expertise throughout the group means that as changes in the market continue, you will be able to keep up with the ever-increasing demand for these unusual parts.

No compromise

Whether you are using a fast-moving Febi brake disc or an unusual hazard warning switch, whether the items is produced in-house or by one of Febi's production partners, the philosophy is the same. There is no compromise on quality.

Febi uses state-of-the-art computer controlled production and triple check quality assurance. Only then can their customers be completely assured.

The future

With years of ever-increasing growth through ever changing market conditions, Febi is confident of its future role. Martin Gorton, MD of Febi UK says, "We understand how the market is changing. More emphasis is being placed on the less traditional vehicles, and parts for Volkswagen, Audi, BMW, Mercedes-Benz etc are becoming more and more important. The Febi brand is definitely at the forefront of this move."

See Febi for yourself

Febi understands the difficulties in finding and sourcing parts and supports its customers with a wide range of facilities.

Says Martin Gorton, "Parts suppliers have access to Febi parts via traditional paper catalogues (now in an easier to use line format), the quarterly CD catalogue and Tecdoc. Just go online at www.febi.com and take a look at Febi for yourself".
